Protection elements:

- 1- Create an integrated system that enables the robot to move without falling even in difficult conditions .
- . 2- The design of the screen in a way that preserves its integrity because it is the most sensitive part of the robot
- 3- Put a strong transparent buffer (protection) on the screen.
- 4- Putting rubber covers on sensitive parts to maintain their safety
- 5- Conducting extensive tests on all parts of the robot to ensure its effectiveness and accuracy.

Some suggestions for future work robot :

- 1- Providing the robot with a clear and powerful voice system that enables it to give instructions anywhere.
- 2- Make the robot answer all the questions of customers or others by linking a voice call with the employee.
- 3- Providing the robot with charging ports for smart devices.
